

License Plate Recognition

A simple, cost-effective way to manage car parks

The license plate recognition solution uses cameras and image/video analytics to enhance your carpark management. With its multi-functional features, it helps to operate car parks with greater efficiency at lower costs, and also enhances security by serving as a surveillance system. It is also a big data collector, and can be integrated with different systems to perform add-on functions such as parking lot navigation and car finding assistance.

Main Features

Auto alert feature to detect suspicious cars

Fast recognition of cars going at a high speed of up to 120km/h

Support worldwide license plates recognition and able to read license numbers and city names

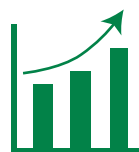

Capture images of a vehicle's undercarriage discreetly

Benefits

High accuracy with state-of-the-art technology

Boost efficiency with speeded up procedures

Quick check-in and check-out to deliver better customer experience

Sensor-Free
